

# The **Limits** of Regular Languages

# Announcements

- Problem Set 5 due right now.
- Problem Set 6 out, due Friday, November 11 at 2:15PM.
  - Stop by OH with questions!
  - Email [cs103@cs.stanford.edu](mailto:cs103@cs.stanford.edu) with questions!
- Friday Four Square today!

# A Counting Argument

- There are more languages than strings (Cantor's theorem; first lecture!)
- There are no more regular languages than strings (can describe regular languages using regular expressions).
- So some languages cannot be regular.
- What are they? What do they look like?

# Visiting Multiple States

- Let  $D$  be a DFA with  $n$  states.
- Any string  $w$  accepted by  $D$  that has length at least  $n$  must visit some state twice.
  - Number of states visited is equal to the length of the string plus one.
  - By the **pigeonhole principle**, some state is duplicated.
- The substring of  $w$  between those revisited states can be removed, duplicated, tripled, quadrupled, etc. without changing the fact that  $w$  is accepted by  $D$ .

# Informally

- Let  $L$  be a regular language.
- If we have a string  $w \in L$  that is “sufficiently long,” then we can split the string into three pieces and “pump” the middle.
- Write  $w = xyz$ .
- Then  $xy^0z, xy^1z, xy^2z, \dots, xy^nz, \dots$  are all in  $L$ .
  - **Notation:**  $y^n$  means “ $n$  copies of  $y$ .”

# The Weak Pumping Lemma

- The **Weak Pumping Lemma for Regular Languages** states that

**For any** regular language  $L$ ,

**There exists** a positive natural number  $n$  such that

**For any**  $w \in L$  with  $|w| \geq n$ ,

**There exists** strings  $x, y, z$  such that

**For any** natural number  $i$ ,

$$w = xyz,$$

$$y \neq \varepsilon$$

$$xy^iz \in L$$

# The Weak Pumping Lemma

- The **Weak Pumping Lemma for Regular Languages** states that

$\forall$  regular language  $L$ ,

$\exists$  a positive natural number  $n$  such that

$\forall w \in L$  with  $|w| \geq n$ ,

$\exists$  strings  $x, y, z$  such that

$\forall$  natural number  $i$ ,

$$w = xyz,$$

$$y \neq \varepsilon$$

$$xy^iz \in L$$

# The Weak Pumping Lemma

- The **Weak Pumping Lemma for Regular Languages** states that

$\forall$  regular language  $L$

$\exists$  a positive natural

$\forall w \in L$  with  $|w| \geq n$

$\exists$  strings  $x, y, z$

$\forall$  natural

$w = xyz$

$y \neq \epsilon$

$xy^iz \in L$

# The Weak Pumping Lemma

- The **Weak Pumping Lemma for Regular Languages** states that

**For any** regular language  $L$ ,

**There exists** a positive natural number  $n$  such that

**For any**  $w \in L$  with  $|w| \geq n$ ,

**There exists** strings  $x, y, z$  such that

**For any** natural number  $i$ ,

$$w = xyz,$$

$$y \neq \varepsilon$$

$$xy^iz \in L$$

# The Weak Pumping Lemma

- The **Weak Pumping Lemma for Regular Languages** states that

**For any** regular language  $L$ ,

**There exists** a positive natural number  $n$  such that

**For any**  $w \in L$  with  $|w| \geq n$ ,

**There exists** strings  $x, y, z$  such that

**For any** natural number  $i$ ,

$$w = xyz,$$

$$y \neq \varepsilon$$

$$xy^iz \in L$$

This number  $n$  is sometimes called the pumping length.

# The Weak Pumping Lemma

- The **Weak Pumping Lemma for Regular Languages** states that

**For any** regular language  $L$ ,

**There exists** a positive natural number  $n$  such that

**For any**  $w \in L$  with  $|w| \geq n$ ,

**There exists** strings  $x, y, z$  such that

**For any** natural number  $i$ ,

$$w = xyz,$$

$$y \neq \varepsilon$$

$$xy^iz \in L$$

strings longer than the pumping length must have a special property.

# The Weak Pumping Lemma

- The **Weak Pumping Lemma for Regular Languages** states that

**For any** regular language  $L$ ,

**There exists** a positive natural number  $n$  such that

**For any**  $w \in L$  with  $|w| \geq n$ ,

**There exists** strings  $x, y, z$  such that

**For any** natural number  $i$ ,

$w = xyz$ ,  $w$  can be broken into three pieces,

$y \neq \varepsilon$

$xy^iz \in L$

# The Weak Pumping Lemma

- The **Weak Pumping Lemma for Regular Languages** states that

**For any** regular language  $L$ ,

**There exists** a positive natural number  $n$  such that

**For any**  $w \in L$  with  $|w| \geq n$ ,

**There exists** strings  $x, y, z$  such that

**For any** natural number  $i$ ,

$w = xyz$ ,  $w$  can be broken into three pieces,

$y \neq \varepsilon$  where the middle piece isn't empty,

$xy^iz \in L$

# The Weak Pumping Lemma

- The **Weak Pumping Lemma for Regular Languages** states that

**For any** regular language  $L$ ,

**There exists** a positive natural number  $n$  such that

**For any**  $w \in L$  with  $|w| \geq n$ ,

**There exists** strings  $x, y, z$  such that

**For any** natural number  $i$ ,

$w = xyz$ ,       $w$  can be broken into three pieces,

$y \neq \varepsilon$       where the middle piece isn't empty,

$xy^iz \in L$       where the middle piece can be replicated zero or more times.

# The Weak Pumping Lemma

- Let  $\Sigma = \{0, 1\}$  and  
 $L = \{ w \mid w \text{ contains } 00 \text{ as a substring.} \}$
- Any string of length 3 or greater can be split into three pieces, the second of which can be “pumped.”

# The Weak Pumping Lemma

- Let  $\Sigma = \{0, 1\}$  and  
 $L = \{ w \mid w \text{ contains } 00 \text{ as a substring.} \}$
- Any string of length 3 or greater can be split into three pieces, the second of which can be “pumped.”

# The Weak Pumping Lemma

- Let  $\Sigma = \{0, 1\}$  and  
 $L = \{ w \mid w \text{ contains } 00 \text{ as a substring.} \}$
- Any string of length 3 or greater can be split into three pieces, the second of which can be “pumped.”

# The Weak Pumping Lemma

- Let  $\Sigma = \{0, 1\}$  and  
 $L = \{ w \mid w \text{ contains } 00 \text{ as a substring.} \}$
- Any string of length 3 or greater can be split into three pieces, the second of which can be “pumped.”

# The Weak Pumping Lemma

- Let  $\Sigma = \{0, 1\}$  and  
 $L = \{ w \mid w \text{ contains } 00 \text{ as a substring.} \}$
- Any string of length 3 or greater can be split into three pieces, the second of which can be “pumped.”

# The Weak Pumping Lemma

- Let  $\Sigma = \{0, 1\}$  and  
 $L = \{ w \mid w \text{ contains } 00 \text{ as a substring.} \}$
- Any string of length 3 or greater can be split into three pieces, the second of which can be “pumped.”

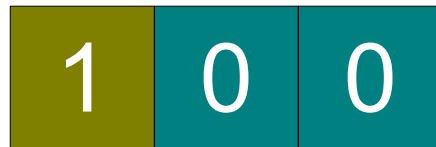

# The Weak Pumping Lemma

- Let  $\Sigma = \{0, 1\}$  and  
 $L = \{ w \mid w \text{ contains } 00 \text{ as a substring.} \}$
- Any string of length 3 or greater can be split into three pieces, the second of which can be “pumped.”

# The Weak Pumping Lemma

- Let  $\Sigma = \{0, 1\}$  and  
 $L = \{ w \mid w \text{ contains } 00 \text{ as a substring.} \}$
- Any string of length 3 or greater can be split into three pieces, the second of which can be “pumped.”

A diagram illustrating the decomposition of the string "100" into three segments. The first segment is "1" (olive green), the second is "0" (teal), and the third is "0" (teal).

# The Weak Pumping Lemma

- Let  $\Sigma = \{0, 1\}$  and  
 $L = \{ w \mid w \text{ contains } 00 \text{ as a substring.} \}$
- Any string of length 3 or greater can be split into three pieces, the second of which can be “pumped.”

The first piece is just the empty string! This is perfectly fine.

# The Weak Pumping Lemma

- Let  $\Sigma = \{0, 1\}$  and  
 $L = \{ w \mid w \text{ contains } 00 \text{ as a substring.} \}$
- Any string of length 3 or greater can be split into three pieces, the second of which can be “pumped.”

# The Weak Pumping Lemma

- Let  $\Sigma = \{0, 1\}$  and  
 $L = \{ w \mid w \text{ contains } 00 \text{ as a substring.} \}$
- Any string of length 3 or greater can be split into three pieces, the second of which can be “pumped.”

# The Weak Pumping Lemma

- Let  $\Sigma = \{0, 1\}$  and  
 $L = \{ w \mid w \text{ contains } 00 \text{ as a substring.} \}$
- Any string of length 3 or greater can be split into three pieces, the second of which can be “pumped.”

# The Weak Pumping Lemma

- Let  $\Sigma = \{0, 1\}$  and  
 $L = \{ w \mid w \text{ contains } 00 \text{ as a substring.} \}$
- Any string of length 3 or greater can be split into three pieces, the second of which can be “pumped.”

# The Weak Pumping Lemma

- Let  $\Sigma = \{0, 1\}$  and  
 $L = \{ w \mid w \text{ contains } 00 \text{ as a substring.} \}$
- Any string of length 3 or greater can be split into three pieces, the second of which can be “pumped.”

# The Weak Pumping Lemma

- Let  $\Sigma = \{0, 1\}$  and  
 $L = \{ w \mid w \text{ contains } 00 \text{ as a substring.} \}$

1	1	0	0	0	0	1	0	0	1
---	---	---	---	---	---	---	---	---	---

# The Weak Pumping Lemma

- Let  $\Sigma = \{0, 1\}$  and  
 $L = \{ w \mid w \text{ contains } 00 \text{ as a substring.} \}$
- Any string of length 3 or greater can be split into three pieces, the second of which can be “pumped.”

1 1 0 0 0 0 1 0 0 1 0 0 1

# The Weak Pumping Lemma

# The Weak Pumping Lemma

- Let  $\Sigma = \{0, 1\}$  and  
 $L = \{ \varepsilon, 0, 1, 00, 01, 10, 11 \}$

# The Weak Pumping Lemma

- Let  $\Sigma = \{0, 1\}$  and  
 $L = \{ \varepsilon, 0, 1, 00, 01, 10, 11 \}$
- Any string of length 3 or greater can be split into three pieces, the second of which can be “pumped.”

# The Weak Pumping Lemma

- Let  $\Sigma = \{0, 1\}$  and  
 $L = \{ \varepsilon, 0, 1, 00, 01, 10, 11 \}$
- Any string of length 3 or greater can be split into three pieces, the second of which can be “pumped.”

The weak pumping lemma holds for finite languages because the pumping length can be longer than the longest string!

# Testing Equality

- The **equality problem** is defined as follows:  
Given two strings  $x$  and  $y$ , report whether  $x = y$ .
- Let  $\Sigma = \{0, 1, ?\}$ . We can encode the equality problem as a string of the form  $x?y$ .
  - “Is 001 equal to 110?” would be **001?110**
  - “Is 11 equal to 11?” would be **11?11**
  - “Is 110 equal to 110?” would be **110?110**
- Let  $EQUAL = \{ w?w \mid w \in \{0, 1\}^* \}$
- **Question:** Is  $EQUAL$  a regular language?

# The Weak Pumping Lemma

- The **Weak Pumping Lemma for Regular Languages** states that

**For any** regular language  $L$ ,

**There exists** a positive natural number  $n$  such that

**For any**  $w \in L$  with  $|w| \geq n$ ,

**There exists** strings  $x, y, z$  such that

**For any** natural number  $i$ ,

$w = xyz$ ,  $w$  can be broken into three pieces,

$y \neq \varepsilon$  where the middle piece isn't empty,

$xy^iz \in L$  where the middle piece can be replicated zero or more times.

# Using the Weak Pumping Lemma

$$EQUAL = \{ w?w \mid w \in \{0, 1\}^* \}$$

# What's Going On?

- The weak pumping lemma says that for “sufficiently long” strings, we should be able to pump some part of the string.
- We can't pump any part containing the  $?$ , because we can't duplicate or remove it.
- We can't pump just one part of the string, because then the strings on opposite sides of the  $?$  wouldn't match.
- **Can we formally show that *EQUAL* is not regular?**

**For any** regular language  $L$ ,  
**There exists** a positive natural number  $n$  such that  
**For any**  $w \in L$  with  $|w| \geq n$ ,  
**There exists** strings  $x, y, z$  such that  
**For any** natural number  $i$ ,  
 $w = xyz$ ,  
 $y \neq \varepsilon$   
 $xy^iz \in L$

*Theorem: EQUAL is not regular.*

**For any** regular language  $L$ ,  
**There exists** a positive natural number  $n$  such that  
**For any**  $w \in L$  with  $|w| \geq n$ ,  
**There exists** strings  $x, y, z$  such that  
**For any** natural number  $i$ ,  
 $w = xyz$ ,  
 $y \neq \epsilon$   
 $xy^iz \in L$

*Theorem:*  $EQUAL$  is not regular.

*Proof:* By contradiction; assume that  $EQUAL$  is regular.

**For any** regular language  $L$ ,

**There exists** a positive natural number  $n$  such that

For any  $w \in L$  with  $|w| \geq n$ ,

There exists strings  $x, y, z$  such that

For any natural number  $i$ ,

$$w = xyz,$$

$$y \neq \varepsilon$$

$$xy^iz \in L$$

*Theorem:*  $EQUAL$  is not regular.

*Proof:* By contradiction; assume that  $EQUAL$  is regular.

**For any** regular language  $L$ ,  
**There exists** a positive natural number  $n$  such that  
For any  $w \in L$  with  $|w| \geq n$ ,  
There exists strings  $x, y, z$  such that  
For any natural number  $i$ ,  
 $w = xyz$ ,  
 $y \neq \varepsilon$   
 $xy^iz \in L$

*Theorem:*  $EQUAL$  is not regular.

*Proof:* By contradiction; assume that  $EQUAL$  is regular. Let  $n$  be the pumping length guaranteed by the weak pumping lemma.

**For any** regular language  $L$ ,  
**There exists** a positive natural number  $n$  such that  
**For any**  $w \in L$  with  $|w| \geq n$ ,  
**There exists** strings  $x, y, z$  such that  
**For any** natural number  $i$ ,  
 $w = xyz$ ,  
 $y \neq \epsilon$   
 $xy^iz \in L$

*Theorem:*  $EQUAL$  is not regular.

*Proof:* By contradiction; assume that  $EQUAL$  is regular. Let  $n$  be the pumping length guaranteed by the weak pumping lemma.

For any regular language  $L$ ,

There exists a positive natural number  $n$  such that

**For any  $w \in L$  with  $|w| \geq n$ ,**

There exists strings  $x, y, z$  such that

For any natural number  $i$ ,

$$w = xyz,$$

$$y \neq \varepsilon$$

$$xy^iz \in L$$

*Theorem:*  $EQUAL$  is not regular.

*Proof:* By contradiction; assume that  $EQUAL$  is regular. Let  $n$  be the pumping length guaranteed by the weak pumping lemma.

For any regular language  $L$ ,

There exists a positive natural number  $n$  such that

**For any  $w \in L$  with  $|w| \geq n$ ,**

There exists strings  $x, y, z$  such that

For any natural number  $i$ ,

$$w = xyz,$$

$$y \neq \varepsilon$$

$$xy^iz \in L$$

*Theorem:*  $EQUAL$  is not regular.

*Proof:* By contradiction; assume that  $EQUAL$  is regular. Let  $n$  be the pumping length guaranteed by the weak pumping lemma.

The hardest part of most proofs with the pumping lemma is choosing some string that we should be able to pump but cannot. In this case, we already saw a good example, so we'll choose it here.

For any regular language  $L$ ,

There exists a positive natural number  $n$  such that

**For any  $w \in L$  with  $|w| \geq n$ ,**

There exists strings  $x, y, z$  such that

For any natural number  $i$ ,

$$w = xyz,$$

$$y \neq \varepsilon$$

$$xy^iz \in L$$

*Theorem:*  $EQUAL$  is not regular.

*Proof:* By contradiction; assume that  $EQUAL$  is regular. Let  $n$  be the pumping length guaranteed by the weak pumping lemma. Let  $w = 0^n?0^n$ .

For any regular language  $L$ ,

There exists a positive natural number  $n$  such that

**For any  $w \in L$  with  $|w| \geq n$ ,**

There exists strings  $x, y, z$  such that

For any natural number  $i$ ,

$$w = xyz,$$

$$y \neq \varepsilon$$

$$xy^iz \in L$$

*Theorem:*  $EQUAL$  is not regular.

*Proof:* By contradiction; assume that  $EQUAL$  is regular. Let  $n$  be the pumping length guaranteed by the weak pumping lemma. Let  $w = 0^n?0^n$ . Then  $w \in EQUAL$  and  $|w| = 2n + 1 \geq n$ .

**For any** regular language  $L$ ,

**There exists** a positive natural number  $n$  such that

**For any**  $w \in L$  with  $|w| \geq n$ ,

**There exists** strings  $x, y, z$  such that

**For any** natural number  $i$ ,

$$w = xyz,$$

$$y \neq \varepsilon$$

$$xy^iz \in L$$

*Theorem:*  $EQUAL$  is not regular.

*Proof:* By contradiction; assume that  $EQUAL$  is regular. Let  $n$  be the pumping length guaranteed by the weak pumping lemma. Let  $w = 0^n?0^n$ . Then  $w \in EQUAL$  and  $|w| = 2n + 1 \geq n$ .

For any regular language  $L$ ,

There exists a positive natural number  $n$  such that

**For any**  $w \in L$  with  $|w| \geq n$ ,

**There exists** strings  $x, y, z$  such that

**For any** natural number  $i$ ,

$$w = xyz,$$

$$y \neq \varepsilon$$

$$xy^iz \in L$$

*Theorem:*  $EQUAL$  is not regular.

*Proof:* By contradiction; assume that  $EQUAL$  is regular. Let  $n$  be the pumping length guaranteed by the weak pumping lemma. Let  $w = 0^n?0^n$ . Then  $w \in EQUAL$  and  $|w| = 2n + 1 \geq n$ .

For any regular language  $L$ ,

There exists a positive natural number  $n$  such that

**For any  $w \in L$  with  $|w| \geq n$ ,**

**There exists strings  $x, y, z$  such that**

**For any natural number  $i$ ,**

$w = xyz,$

$y \neq \varepsilon$

$xy^iz \in L$

*Theorem:*  $EQUAL$  is not regular.

*Proof:* By contradiction; assume that  $EQUAL$  is regular. Let  $n$  be the pumping length guaranteed by the weak pumping lemma. Let  $w = 0^n?0^n$ . Then  $w \in EQUAL$  and  $|w| = 2n + 1 \geq n$ . Thus by the weak pumping lemma, we can write  $w = xyz$  such that  $y \neq \varepsilon$  and for any natural number  $i$ ,  $xy^iz \in EQUAL$ .

**For any** regular language  $L$ ,

**There exists** a positive natural number  $n$  such that

**For any**  $w \in L$  with  $|w| \geq n$ ,

**There exists** strings  $x, y, z$  such that

**For any** natural number  $i$ ,

$$w = xyz,$$

$$y \neq \varepsilon$$

$$xy^iz \in L$$

*Theorem:*  $EQUAL$  is not regular.

*Proof:* By contradiction; assume that  $EQUAL$  is regular. Let  $n$  be the pumping length guaranteed by the weak pumping lemma. Let  $w = 0^n?0^n$ . Then  $w \in EQUAL$  and  $|w| = 2n + 1 \geq n$ . Thus by the weak pumping lemma, we can write  $w = xyz$  such that  $y \neq \varepsilon$  and for any natural number  $i$ ,  $xy^iz \in EQUAL$ .

**For any** regular language  $L$ ,

**There exists** a positive natural number  $n$  such that

**For any**  $w \in L$  with  $|w| \geq n$ ,

**There exists** strings  $x, y, z$  such that

**For any** natural number  $i$ ,

$w = xyz$ ,

$y \neq \varepsilon$

$xy^iz \in L$

*Theorem:*  $EQUAL$  is not regular.

*Proof:* By contradiction; assume that  $EQUAL$  is regular. Let  $n$  be the pumping length guaranteed by the weak pumping lemma. Let  $w = 0^n?0^n$ . Then  $w \in EQUAL$  and  $|w| = 2n + 1 \geq n$ . Thus by the weak pumping lemma, we can write  $w = xyz$  such that  $y \neq \varepsilon$  and for any natural number  $i$ ,  $xy^iz \in EQUAL$ .

At this point, we have some string that we should be able to split into pieces and pump. The rest of the proof shows that no matter what choice we make, this is impossible.

**For any** regular language  $L$ ,

**There exists** a positive natural number  $n$  such that

**For any**  $w \in L$  with  $|w| \geq n$ ,

**There exists** strings  $x, y, z$  such that

**For any** natural number  $i$ ,

$$w = xyz,$$

$$y \neq \varepsilon$$

$$xy^iz \in L$$

*Theorem:*  $EQUAL$  is not regular.

*Proof:* By contradiction; assume that  $EQUAL$  is regular. Let  $n$  be the pumping length guaranteed by the weak pumping lemma. Let  $w = 0^n?0^n$ . Then  $w \in EQUAL$  and  $|w| = 2n + 1 \geq n$ . Thus by the weak pumping lemma, we can write  $w = xyz$  such that  $y \neq \varepsilon$  and for any natural number  $i$ ,  $xy^iz \in EQUAL$ . Then  $y$  cannot contain  $?$ , since otherwise if we let  $i = 0$ ,  $xy^iz = xz$  does not contain  $?$  and would not be in  $EQUAL$ .

**For any** regular language  $L$ ,  
**There exists** a positive natural number  $n$  such that  
**For any**  $w \in L$  with  $|w| \geq n$ ,  
**There exists** strings  $x, y, z$  such that  
**For any** natural number  $i$ ,  
 $w = xyz$ ,  
 $y \neq \varepsilon$   
 $xy^iz \in L$

*Theorem:*  $EQUAL$  is not regular.

Since  $y$  is completely to the left or right of the  $?$ , then  $y = 0^k$ . Now, we consider two cases:

*Case 1:*  $y$  is to the left of the  $?$ . Then  $xy^2z = 0^{n+k}?0^n \notin EQUAL$ , contradicting the weak pumping lemma.

*Case 2:*  $y$  is to the right of the  $?$ . Then  $xy^2z = 0^n?0^{n+k} \notin EQUAL$ , contradicting the weak pumping lemma.

In either case we reach a contradiction, so our assumption was wrong and  $EQUAL$  is not regular. ■

# Nonregular Languages

- The weak pumping lemma describes a property common to all regular languages.
- Any language  $L$  which does not have this property **cannot be regular**.
- What other languages can we find that are not regular?

# A Canonical Nonregular Language

- Consider the language  $L = \{ 0^n 1^n \mid n \in \mathbb{N} \}$ .  
$$L = \{ \varepsilon, 01, 0011, 000111, 00001111, \dots \}$$
- L is a **classic example** of a nonregular language.
- Intuitively: If you have only finitely many states in a DFA, you can't “remember” an arbitrary number of 0s.
- How would we prove that L is nonregular?

# The Pumping Lemma as a Game

- The weak pumping lemma can be thought of as a game between **you** and an **adversary**.
- **You win** if you can prove that the pumping lemma fails.
- **The adversary wins** if the adversary can make a choice for which the pumping lemma succeeds.
- The game goes as follows:
  - **The adversary** chooses a pumping length  $n$ .
  - **You** choose a string  $w$  with  $|w| \geq n$  and  $w \in L$ .
  - **The adversary** breaks it into  $x$ ,  $y$ , and  $z$ .
  - **You** choose an  $i$  such that  $xy^iz \notin L$  (if you can't, you lose!)

*Case 2:*  $y$  consists solely of 1s. Then  $xy^0 z = xz = 0^n 1^{n-|y|}$ , and since  $|y| > 0$ ,  $xz \notin L$ .

*Case 3:*  $y$  consists of  $k$  0s followed by  $m$  1s.

*Theorem:*  $L = \{ 0^n 1^n \mid n \in \mathbb{N} \}$  is not regular.

*Proof:* By contradiction; assume  $L$  is regular. Let  $n$  be the pumping length guaranteed by the weak pumping lemma. Consider the string  $w = 0^n 1^n$ . Then  $|w| = 2n \geq n$  and  $w \in L$ , so we can write  $w = xyz$  such that  $y \neq \varepsilon$  and for any natural number  $i$ ,  $xy^i z \in L$ . We consider three cases:

*Case 1:*  $y$  consists solely of 0s. Then  $xy^0 z = xz = 0^{n-|y|} 1^n$ , and since  $|y| > 0$ ,  $xz \notin L$ .

*Case 2:*  $y$  consists solely of 1s. Then  $xy^0 z = xz = 0^n 1^{n-|y|}$ , and since  $|y| > 0$ ,  $xz \notin L$ .

*Case 3:*  $y$  consists of  $k$  0s followed by  $m$  1s. Then  $xy^2 z$  has the form  $0^n 1^m 0^k 1^{n+m}$ , so  $xy^2 z \notin L$ .

*Theorem:*  $L = \{ 0^n 1^n \mid n \in \mathbb{N} \}$  is not regular.

*Proof:* By contradiction; assume  $L$  is regular. Let  $n$  be the pumping length guaranteed by the weak pumping lemma. Consider the string  $w = 0^n 1^n$ . Then  $|w| = 2n \geq n$  and  $w \in L$ , so we can write  $w = xyz$  such that  $y \neq \varepsilon$  and for any natural number  $i$ ,  $xy^i z \in L$ . We consider three cases:

*Case 1:*  $y$  consists solely of 0s. Then  $xy^0 z = xz = 0^{n-|y|} 1^n$ , and since  $|y| > 0$ ,  $xz \notin L$ .

*Case 2:*  $y$  consists solely of 1s. Then  $xy^0 z = xz = 0^n 1^{n-|y|}$ , and since  $|y| > 0$ ,  $xz \notin L$ .

*Case 3:*  $y$  consists of  $k$  0s followed by  $m$  1s. Then  $xy^2 z$  has the form  $0^n 1^m 0^k 1^{n+m}$ , so  $xy^2 z \notin L$ .

In all three cases we reach a contradiction, so our assumption was wrong and  $L$  is not regular.

*Theorem:*  $L = \{ 0^n 1^n \mid n \in \mathbb{N} \}$  is not regular.

*Proof:* By contradiction; assume  $L$  is regular. Let  $n$  be the pumping length guaranteed by the weak pumping lemma. Consider the string  $w = 0^n 1^n$ . Then  $|w| = 2n \geq n$  and  $w \in L$ , so we can write  $w = xyz$  such that  $y \neq \varepsilon$  and for any natural number  $i$ ,  $xy^i z \in L$ . We consider three cases:

*Case 1:*  $y$  consists solely of 0s. Then  $xy^0 z = xz = 0^{n-|y|} 1^n$ , and since  $|y| > 0$ ,  $xz \notin L$ .

*Case 2:*  $y$  consists solely of 1s. Then  $xy^0 z = xz = 0^n 1^{n-|y|}$ , and since  $|y| > 0$ ,  $xz \notin L$ .

*Case 3:*  $y$  consists of  $k$  0s followed by  $m$  1s. Then  $xy^2 z$  has the form  $0^n 1^m 0^k 1^{n+m}$ , so  $xy^2 z \notin L$ .

In all three cases we reach a contradiction, so our assumption was wrong and  $L$  is not regular. ■

# Counting Symbols

- Consider the alphabet  $\Sigma = \{ 0, 1 \}$  and the language

$BALANCE = \{ w \mid w \text{ contains an equal number of 0s and 1s. } \}$

- For example:

- $01 \in BALANCE$
- $110010 \in BALANCE$
- $11011 \notin BALANCE$

- **Question:** Is  $BALANCE$  a regular language?

# *BALANCE* and the Weak Pumping Lemma

# An Incorrect Proof

*Theorem:* *BALANCE* is regular.

*Proof:* We show that *BALANCE* satisfies the condition of the pumping lemma. Let  $n = 2$  and consider any string  $w \in \text{BALANCE}$  such that  $|w| \geq 2$ . Then we can write  $w = xyz$  such that  $x = z = \varepsilon$  and  $y = w$ , so  $y \neq \varepsilon$ . Then for any natural number  $i$ ,  $xy^iz = w^i$ , which has the same number of 0s and 1s. Since *BALANCE* passes the conditions of the weak pumping lemma, *BALANCE* is regular. ■

der any string  
ve can write  
 $y \neq \epsilon$ . Then for  
the same  
asses the  
*BALANCE* is

# The Weak Pumping Lemma

- The **Weak Pumping Lemma for Regular Languages** states that

**For any** regular language  $L$ ,

**There exists** a positive natural number  $n$  such that

**For any**  $w \in L$  with  $|w| \geq n$ ,

**There exists** strings  $x, y, z$  such that

**For any** natural number  $i$ ,

$w = xyz$ ,  $w$  can be broken into three pieces,

$y \neq \varepsilon$  where the middle piece isn't empty,

$xy^iz \in L$  where the middle piece can be replicated zero or more times.

# The Weak Pumping Lemma

- The **Weak Pumping Lemma for Regular Languages** states that

**For any** regular language  $L$ ,

This says nothing about languages that aren't regular!

**There exists** a positive natural number  $n$  such that

**For any**  $w \in L$  with  $|w| \geq n$ ,

**There exists** strings  $x, y, z$  such that

**For any** natural number  $i$ ,

$w = xyz$ ,  $w$  can be broken into three pieces,

$y \neq \varepsilon$  where the middle piece isn't empty,

$xy^iz \in L$  where the middle piece can be replicated zero or more times.

# Caution with the Pumping Lemma

- The weak (and full) pumping lemma describe a **necessary** condition of regular languages.
  - $L$  is regular  $\rightarrow$   $L$  passes the pumping lemma
- The weak (and full) pumping lemma is not a **sufficient** condition of regular languages.
  - “ $L$  passes the pumping lemma  $\rightarrow$   $L$  is regular” is **not true**.
- If a language fails the pumping lemma, it is definitely **not** regular.
- If a language passes the pumping lemma, we learn nothing about whether it is regular or not.

# *BALANCE* is Not Regular

- The language *BALANCE* can be proven not to be regular using a stronger version of the pumping lemma.
- To see the full pumping lemma, we need to revisit our original insight.

# An Important Observation

**0 1 1 0 1 1 0 1 1 0 1 1 1**

# An Important Observation

# An Important Observation

# An Important Observation

# Weak Pumping Lemma Intuition

- Let  $D$  be a DFA with  $n$  states.
- Any string  $w$  accepted by  $D$  that has length at least  $n$  must visit some state twice.
  - Number of states visited is equal to  $|w| + 1$ .
  - By the **pigeonhole principle**, some state is duplicated.
- The substring of  $w$  in-between those revisited states can be removed, duplicated, tripled, quadrupled, etc. without changing the fact that  $w$  is accepted by  $D$ .

# Pumping Lemma Intuition

- Let  $D$  be a DFA with  $n$  states.
- Any string  $w$  accepted by  $D$  that has length at least  $n$  must visit some state twice **within its first  $n$  characters**.
  - Number of states visited is equal  $n + 1$ .
  - By the **pigeonhole principle**, some state is duplicated.
- The substring of  $w$  in-between those revisited states can be removed, duplicated, tripled, quadrupled, etc. without changing the fact that  $w$  is accepted by  $D$ .

# The Weak Pumping Lemma

**For any** regular language  $L$ ,

**There exists** a positive natural number  $n$  such that

**For any**  $w \in L$  with  $|w| \geq n$ ,

**There exists** strings  $x, y, z$  such that

**For any** natural number  $i$ ,

$w = xyz$ ,  $w$  can be broken into three pieces,

$y \neq \varepsilon$  where the middle piece isn't empty,

$xy^iz \in L$  where the middle piece can be replicated zero or more times.

# The Pumping Lemma

**For any** regular language  $L$ ,

**There exists** a positive natural number  $n$  such that

**For any**  $w \in L$  with  $|w| \geq n$ ,

**There exists** strings  $x, y, z$  such that

**For any** natural number  $i$ ,

$w = xyz$ ,  $w$  can be broken into three pieces,

$|xy| \leq n$ , where the first two pieces occur at the start of the string,

$y \neq \varepsilon$  where the middle piece isn't empty,

$xy^iz \in L$  where the middle piece can be replicated zero or more times.

# Why This Change Matters

- The restriction  $|xy| \leq n$  means that we can limit where the string to pump must be.
- If we specifically craft the first  $n$  characters of the string to pump, we can force  $y$  to have a specific property.
- We can then show that  $y$  cannot be pumped arbitrarily many times.

# *BALANCE* and the Pumping Lemma

$BALANCE = \{ w \mid w \text{ contains an equal number of 0s and 1s.} \}$

# *BALANCE* and the Pumping Lemma

$BALANCE = \{ w \mid w \text{ contains an equal number of 0s and 1s.} \}$

Suppose the pumping length is 4.

# *BALANCE* and the Pumping Lemma

$BALANCE = \{ w \mid w \text{ contains an equal number of 0s and 1s.} \}$

Suppose the pumping length is 4.

# *BALANCE* and the Pumping Lemma

*BALANCE* = {  $w$  |  $w$  contains an equal number of 0s and 1s. }

Suppose the pumping length is 4.

Since  $|xy| \leq 4$ , the string to pump must be somewhere in here.

# *BALANCE* and the Pumping Lemma

Since  $|xy| \leq n$ ,  $y$  must consist solely of 0s.

This is why the pumping lemma is more powerful than the weak pumping lemma. We can force  $y$  to be made purely of 0s, rather than some combination of 0s and 1s.

*Theorem: BALANCE is not regular.*

*Proof:* By contradiction; assume that *BALANCE* is regular. Let  $n$  be the length guaranteed by the pumping lemma. Consider the string  $w = 0^n 1^n$ . Then  $|w| = 2n \geq n$  and  $w \in \text{BALANCE}$ . Therefore, there exist strings  $x$ ,  $y$ , and  $z$  such that  $w = xyz$ ,  $|xy| \leq n$ ,  $y \neq \epsilon$ , and for any natural number  $i$ ,  $xy^i z \in \text{BALANCE}$ . Since  $|xy| \leq n$ ,  $y$  must consist solely of 0s. But then  $xy^2 z = 0^{n+|y|} 1^n$ , and since  $|y| > 0$ ,  $xy^2 z \notin \text{BALANCE}$ .

*Theorem: BALANCE is not regular.*

*Proof:* By contradiction; assume that *BALANCE* is regular. Let  $n$  be the length guaranteed by the pumping lemma. Consider the string  $w = 0^n 1^n$ . Then  $|w| = 2n \geq n$  and  $w \in \text{BALANCE}$ .
